SWEng Group 3 Enterprise
QA Self Assessment 2

Name: Marco   Role: Team Leader

How do you feel the project is going in terms of the whole Group's effort, in particular meeting the first Iteration deadline?

The entire team has been working hard, although I think a period of a lack of direction on my behalf meant that there wasn't enough focus, and resulted in a progress reduction, meaning we all had to work hard across the last few days to meet the deadline.

Unfortunately, this meant changing a lot of peoples code which is a shame because, given more time, it could have been a joint effort with the original author, giving them experience whilst keeping the code theirs.

In the future, I will try to maintain a constant and steady rhythm with the team, and use more delegation. Whilst the use of trello seemed like a good move in that people could choose what work they'd do, unfortunately it hasn't proved effective in tackling the app.

How do you feel the project is going in terms of your individual effort, in particular meeting the first Iteration deadline?

I feel as though I was unfairly absent across 2 weeks prior to the first iteration deadline. The work I was doing was minimal, though I tried to make up for it in the last 4 days.

Are you meeting the QA metrics that you set for the QA Manual? (if applicable)

Metric	Am I meeting it?
.Deadlines are being met	Yes. The first iteration submission performed all the functionalit we said it would in the functional spec, and it was handed in on time.
Deliverables are being met	Yes. See above
Team output is to client's satisfaction	Yes? Unlike my original understanding, the client is having no input in the development of the app, so as long as the app is meeting its' specifications, it's to the clients satisfaction.

Do you have any issues with how work is being carried out in the Group? If so, what are they and how would you like them resolved?

I think people haven't been very motivated over the last few weeks, and with the self-delegation method (using trello), work didn't seem to be progressing effectively.

To resolve this issue, I think delegating tasks to individuals at each of the weekly meetings will make sure that everyone knows exactly what they can do, and should be doing, as well as giving the company more control over the development of the app.

Do you have any issues with how meetings are being carried out in the Group? If so, what are they?

The biggie would be the lack of delegation and micro-direction mentioned above.

Do you have any further queries you would like to be brought up in a meeting?
