Minutes for Meeting Number Thirteen [1 Hour]

Agenda:

- Financial Report 2

- Programming for first iteration deadline

Meeting Outcomes:

The meeting started with the team leader talking to individual group members about their work and when it can be merged to the master branch in git. The search page/filters and favourites list are all almost complete. Miranda raised concerns that she could not finish the favourites list until other work had been completed.

The group then moved on to talk about the **Financial Report 2 hand in**. Many hours had been incorrectly entered into the spreadsheet due to confusion caused by the layout of both the analysis document and individual timesheets. The discrepancies will be posted to slack. It was also noted that the actual work hours are down on the estimation.

First Iteration Deadline - The recipe class/parser/ are both done. The app will use 2 XML files Presentation & recipe. All required user stories for the first iteration are found in the user stories section of the functional specification with label MO.

Jack/Software head made several points:

- The filter class was not needed

- Any code taken from online must be referenced.
